

The master method

The master method applies to recurrences of the form

$$T(n) = a T(n/b) + f(n) ,$$

where $a \geq 1$, $b > 1$, and f is asymptotically positive.

Master theorem

$$T(n) = a T(n/b) + f(n)$$

CASE 1: $f(n) \in O(n^{\log_b a - \varepsilon})$
 $\Rightarrow T(n) \in \Theta(n^{\log_b a}) .$

CASE 2: $f(n) \in \Theta(n^{\log_b a})$
 $\Rightarrow T(n) \in \Theta(n^{\log_b a} \log n) .$

CASE 3: $f(n) \in \Omega(n^{\log_b a + \varepsilon})$ and $a f(n/b) \leq c f(n)$
for some $c < 1$
 $\Rightarrow T(n) \in \Theta(f(n)) .$

Merge sort: $a = 2, b = 2 \Rightarrow n^{\log_b a} = n$
 \Rightarrow **CASE 2** $\Rightarrow T(n) \in \Theta(n \log n) .$

2

Three common cases

Compare $f(n)$ with $n^{\log_b a}$:

1. $f(n) \in O(n^{\log_b a - \varepsilon})$ for some constant $\varepsilon > 0$.

- $f(n)$ grows polynomially slower than $n^{\log_b a}$ (by an n^ε factor).

Solution: $T(n) \in \Theta(n^{\log_b a}) .$

2. $f(n) \in \Theta(n^{\log_b a})$.

- $f(n)$ and $n^{\log_b a}$ grow at similar rates.

Solution: $T(n) \in \Theta(n^{\log_b a} \log n) .$

3

Three common cases (cont.)

Compare $f(n)$ with $n^{\log_b a}$:

3. $f(n) \in \Omega(n^{\log_b a + \varepsilon})$ for some constant $\varepsilon > 0$.

- $f(n)$ grows polynomially faster than $n^{\log_b a}$ (by an n^ε factor),

and $f(n)$ satisfies the **regularity condition** that $a f(n/b) \leq c f(n)$ for some constant $c < 1$.

Solution: $T(n) \in \Theta(f(n)) .$

Examples

Ex. $T(n) = 4T(n/2) + n$
 $a = 4, b = 2 \Rightarrow n^{\log_b a} = n^2; f(n) = n.$
CASE 1: $f(n) \in O(n^{2-\varepsilon})$ for $\varepsilon = 1.$
 $\therefore T(n) \in \Theta(n^2).$

Ex. $T(n) = 4T(n/2) + n^2$
 $a = 4, b = 2 \Rightarrow n^{\log_b a} = n^2; f(n) = n^2.$
CASE 2: $f(n) \in \Theta(n^2).$
 $\therefore T(n) \in \Theta(n^2 \log n).$

Examples

Ex. $T(n) = 4T(n/2) + n^3$
 $a = 4, b = 2 \Rightarrow n^{\log_b a} = n^2; f(n) = n^3.$
CASE 3: $f(n) \in \Omega(n^{2+\varepsilon})$ for $\varepsilon = 1$
and $4(n/2)^3 \leq cn^3$ (reg. cond.) for $c = 1/2.$
 $\therefore T(n) \in \Theta(n^3).$

Ex. $T(n) = 4T(n/2) + n^2/\log n$
 $a = 4, b = 2 \Rightarrow n^{\log_b a} = n^2; f(n) = n^2/\log n.$
Master method does not apply.
